## Remediation next steps and securing your data in Slack

### Share secure links versus files

Sharing links to Google Drive, GitHub, JIRA, etc are helping for your business safe since additional authorization is required. Avoid file dumps in Slack when possible.

[Learn more](#)

### Remove unused Slack 3rd party apps

Every authorized Slack 3rd party extension has the ability to fetch data about your business, your messages, and your employees. Make sure you remove non-essential apps.

[Review installed apps](#)

### Review guest access

Every project and channel has the ability to leave open doors for your internal company data. Make sure to deactivate previous accounts to prevent data loss.
